Zayd Ansari

Pimpri, Maharashtra, India | +91-9158908486 | ahmedansarizayd@gmail.com | LinkedIn | GitHub

Professional Summary

Generative AI Engineer specializing in LLM-powered enterprise applications, multi-agent systems, RAG pipelines, and MCP-based tool-calling and stateful agent orchestration. Hands-on experience orchestrating Claude and open-source models (Qwen, GPT-4.1) across Copilot Studio and custom agent pipelines, with LoRA/QLoRA fine-tuning, Hugging Face, Ollama, AutoGen, FastAPI, and Azure. Strong foundation in Power BI, Microsoft Fabric, and enterprise API integration for production AI workflows.

Technical Skills

Generative AI: LLMs, Claude, RAG, Embeddings, Prompt Engineering, AI Agents, Multi-Agent Systems, Tool Calling, MCP, Stateful Agent Orchestration, LLM Evaluation
Microsoft AI & Business Apps: Copilot Studio, Power Automate, Power BI, Microsoft Fabric, Azure, Azure AI Services, Azure SQL, Enterprise API Integration
LLM Fine-Tuning & Engineering: LoRA, QLoRA, PEFT, Hugging Face, GGUF, Ollama, AutoGen, FastAPI, Structured Output, Model Serving
Data Engineering: PySpark, ETL/ELT, Medallion Architecture, SCD Type 2, Data Modeling, Embedding Pipelines
Languages & Tools: Python, SQL, C++, Java, JavaScript, React, Docker, Git, GitHub

Professional Experience

iLink Digital – Software Engineer Trainee, Data Science **Oct 2025 – Present**
- Built an LLM-powered Power BI assistant that uses a domain-fine-tuned open-source model + Model Context Protocol (MCP) to convert natural-language requests into structured tool calls for semantic-model operations.
- Fine-tuned and evaluated 3B–4B open-source LLMs with LoRA/QLoRA; created instruction datasets for table/column discovery, DAX generation, measure creation, relationships, and tool execution.
- Developed private local inference stack (Hugging Face, Ollama, GGUF, 4-bit quantization) optimized for low-latency execution under constrained compute.
- Designed reliable MCP tool-calling flows with schema-aware prompts, context injection, validation, retry logic, and structured responses for small non-reasoning models.
- Built Azure SQL AI infrastructure (metadata stores, embedding pipelines, indexing, retrieval) and a modular FastAPI backend connecting LLM inference, retrieval, tool execution, and enterprise services.

iLink Digital – Consultant Intern, Data Science **Feb 2025 – Aug 2025**
- Designed and implemented Microsoft Fabric pipelines that ingested and transformed 1M+ records across multiple sources for analytics and downstream applications.
- Architected Bronze-Silver-Gold Medallion Architecture with SCD Type 2, adding validation and traceability for historical consistency.
- Developed dimensional models powering 15+ Power BI dashboards, translating business requirements into reliable analytical datasets.

Smart India Hackathon – Finalist **Oct 2023 – Dec 2023**
- Ranked in the top 2% of 51,000 ideas at the SIH Grand Finale; delivered a cybersecurity solution for the Ministry of Power focused on Hardware Trojan detection and supply-chain integrity.

Projects

Copilot Studio Enterprise AI Agent – RAG Knowledge Retrieval **2026**
- Built a **RAG-based** conversational AI agent in Microsoft Copilot Studio, orchestrating GPT-4.1 mini and **Claude Sonnet** across a multi-step agentic flow: query extraction, semantic retrieval, context injection, and response generation.
- Routed queries through Power Automate to an Azure VM-hosted semantic search API over a curated knowledge base, with structured JSON parsing and grounded, source-referenced responses.

iLink Tab-PBI – Fine-Tuned LLM + MCP Power BI Assistant **2026**
- Fine-tuned a domain-specific 3B–4B LLM (LoRA/QLoRA) specialized for Power BI semantic-model tool calling rather than generic text generation.
- Connected the model to the Power BI Modeling MCP server for **stateful, multi-turn tool orchestration** over tables, columns, measures, and relationships; built evaluation/trust-scoring datasets covering success, failure, and retry states to catch hallucinated tool calls.

AI Software Architect **Apr 2026**
- Designed a **5-agent multi-agent architecture** (AutoGen + Groq: planner, specialist, critic) that converts natural-language requirements into complete software specs, schemas, REST APIs, modules, and risk analysis with iterative self-correction and multi-LLM fallback.

MediBook – WhatsApp Appointment Platform **Mar 2026**
- Implemented transaction-safe slot locking to eliminate double bookings; integrated Google Calendar, reminders, waiting lists, and a JWT-secured React portal with async processing.

Education

VIT, Pune – B.Tech, Electronics and Telecommunications Engineering **8.86 CGPA**
July 2021 – May 2025

The Malegaon High School & Jr. College – HSC **90.33%**
April 2021

Certifications

- Microsoft Certified: Power BI Data Analyst Associate (Oct 2025) | Microsoft Fabric Data Analytics Associate Engineer (Jun 2025)
- Microsoft Certified: GitHub Copilot Certificate (May 2026) | Databricks Certified Generative AI Engineer Associate (Aug 2025)
- Deep Learning Specialization – DeepLearning.AI (Jun 2025) | IBM Data Science Professional Certificate (Aug 2024)

Publications and Patent

- Co-authored 3 peer-reviewed publications on AI-driven robotic control and renewable-energy/microgrid systems (Elsevier, IJRES, IJSREM), 2024.
- Patent: A Simulation of Microgrid System Using Microcontroller – 2024/09335, Issued Jun 2025.
